Rectangular Stopper Actuator Guides and Stops Products

Challenge:

A customer in the wood processing industry needed an edge guide for their large routing tables that could be easily moved out of the way. The process was heavy on set-up time, and hurting productivity.

Solution:

Bimba designed a rectangular stopper actuator with a hard coated anodized aluminum body that can extend to stop products and then retract flat. This allows the other products to be moved across the table. The "box" design added additional bearing area and load support. This automated their existing manual process and cut down on set-up time, which increased productivity.

Benefits:

- > "Box" design provides stability and a large bearing area.
- > Multi-functional.
- > Reduces set-up times, increasing productivity.
