

Turnkey Valve Banks Save Time, Money and Space

Challenge:

Pneumadyne engineers were contacted by a manufacturer of solvent extraction systems to provide the pneumatic components for their new equipment. In addition to supplying valves and fittings that were easy to install, the components had to be tested to the customer's specifications prior to shipment.

Requirements

- Leak free
- Compact size
- "Plug and Play" assembly

Solution:

After reviewing the circuit requirements for this application, Pneumadyne engineers determined that valve banks featuring our 15mm solenoid valves and "20" Series solenoid operated valves would meet the customer's specifications. Providing valve banks that are ready to install simplified the final assembly of their pneumatic circuit, saving the customer time and money. Features include:

- Push-in fittings for quick tubing connection
- Wire harness to simplify installation (not shown)
- 100% leak tested to the customer's specification
- Compact manifold saves space

Benefits:

- Push-in fittings for quick tubing connection
- Wire harness included for easy installation
- Compact manifold design saves space

Other Applications:

- Filling/Dispensing
- Test Equipment
- Medical
