

Stainless Steel Air Operated Fluid Valve is Corrosion Resistant

Challenge:

A customer needed a longer lasting solution for dispensing paint. Their current solution was experiencing problems from corrosion, eventually resulting in failure and driving costs up through the purchasing of replacement parts.

Solution:

Bimba provided an all stainless steel, non-corrosive, air operated valve to deliver better sealing in a more compact package. This solution is available with a wide range of seal material for chemical compatibility. Bimba can also offer adjustable volume control and an aerator for laminar flow.

Benefits:

- Corrosion Resistant.
- Long lasting.
- Compact package.

Other Applications:

- Dispensing
- Filling
- Bottling
